

PGDM & PGDM (IB), 2019-21
Financial Econometrics
DM-313 / IB-314
Trimester – III, End-Term Examination: June 2020

Financial Econometrics

Trimester-III, PGDM/IB(19-21)

Both the questions given below are compulsory. Use R and submit your html or pdf file after analysis. Put all your analysis in # in the file itself.

1. The demand for roses. Table 1 gives quarterly data on these variables:

Y_t = quantity of roses sold, dozens

X_2 = average wholesale price of roses, \$/dozen

X_3 = average wholesale price of carnations, \$/dozen

X_4 = average weekly family disposable income, \$/week

1971–III to 1975–II in the Detroit metropolitan area

You are asked to consider the following demand functions:

$Y_t = \alpha_1 + \alpha_2 X_2 t + \alpha_3 X_3 t + \alpha_4 X_4 t + u_t$

$\ln Y_t = \beta_1 + \beta_2 \ln X_2 t + \beta_3 \ln X_3 t + \beta_4 \ln X_4 t + u_t$

Now state the hypothesis and build both the model and do all the necessary model testing and explain the results. Remember your grade is dependent on extent of explanation.

2. Table 2 gives the detail of the USA GDP quarterly data from 1947-2007. You are requested to make ARIMA model of the same. Follow the four steps of the model and explain each of them. The steps are identification, estimation, diagnostic checking and forecasting.

YEAR	Y	X2	X3	X4	X5
