

Please build a credit risk model from the given data below. The steps to build the model must cover following things:-

- 1) Must calculate Information Value (IV) of all the independent variables
- 2) Must conduct Clustering model on the data and reduce the dimension of it.
- 3) Build logistic regression model for the credit data and calculate its accuracy using ROC curve.

Please refer the data and the data description with word file no. 2 and excel file no. 1
