

PGDM (RM), 2018
Management Science
RM-206
Trimester – II, End-Term Examination: Dec 2018

Time allowed: 2 hrs 30 min

Max Marks: 50

Roll No: _____

Instruction: Students are required to write Roll No on every page of the question paper, writing anything except the Roll No will be treated as **Unfair Means**. In case of rough work please use answer sheet.

Section - A

Attempt any 3 out of 5 questions from this section. Each question carries 5 marks .

Question 1 Evening shift resident doctors in a government hospital work five consecutive days and have two consecutive days off. Their five days of work can on any day of the week and their schedule rotates indefinitely. The hospital requires the following minimum number of doctors to work on the given days:

Sun	Mon	Tues	Wed	Thus	Fri	Sat
35	55	60	50	60	50	45

No more than 40 doctors can start their five working days on the same day. Formulate this problem as an LP model to minimize the number of doctors employed by the hospital.

Question 2 Under what conditions is it possible for an LP problem to have more than one optimum solution?

Question 3 Will the northwest-corner solution rule always result in a higher total cost than the Vogel's approximation rule? Why, or why not?

Question 4 'Linear programming is one of the most frequently and successfully applied operations research technique to managerial decisions.' Elucidate this statement with some examples.

Question 5 Consider the assignment problem as shown in Table. In this problem, 5 different jobs are to be assigned to 5 different operators such that the total processing time is minimized. The matrix entries represent processing times in hours.

		Operator				
		1	2	3	4	5
Job	1	10	12	15	12	8
	2	7	16	14	14	11
	3	13	14	7	9	9
	4	12	10	11	13	10
	5	8	13	15	11	15

Section – B

Attempt any 2 out of 3 questions from this section. Each question carries 10 marks.

Question 1 A producer of pleasure boats wants to maximize revenue during the next month. Two types of boats sold, are x_1 and x_2 . Type x_1 sells for \$40,000 and type x_2 sells for \$30,000. The x_1 boats require 10 weeks of labor and 600 board feet of lumber each. The x_2 boats need 3 weeks of labor and 1,000 board feet of lumber. There are 30 weeks of labor and 3,000 board feet of lumber available this season. Because of the desire to avoid

ending up with uncompleted boats, the manager has specified that only integer solutions will be accepted. Use the branch and bound method to obtain the optimal solution. Illustrate the LP relaxation solution and the subproblems in a node diagram.

Question 2 Test the consistency of the following pairwise comparison matrix.

$$\begin{pmatrix} 1 & 5 & 7 \\ 1/5 & 1 & 6 \\ 1/7 & 1/6 & 1 \end{pmatrix}$$

Question 3 Consider the data of a project summarized in Table

Activity	predecessor(s)	Duration (weeks)		
		To	Tm	Tp
A	--	4	4	10
B	--	1	2	9
C	--	2	5	14
D	A	1	4	7
E	A	1	2	3
F	A	1	5	9
G	B, C	1	2	9
H	C	4	4	4
I	D	2	2	8
J	E, G	6	7	8

- Construct the project network.
- Find the expected duration and the variance of each activity.
- Find the critical path and the expected project completion time.
- What is the probability of completing the project on or before 35 weeks?

Section - C

Compulsory Case Study (15 Marks)

Harley's Sand and Gravel Pit has contracted to provide topsoil for three residential housing developments. Topsoil can be supplied from three different "farms" as follows:

Weekly Capacity	Farm (cubic yards)
A	100
B	200
C	200

Demand for the topsoil generated by the construction projects is

Weekly Demand	Project (cubic yards)
1	50
2	150
3	300

The manager of the sand and gravel pit has estimated the cost per cubic yard to ship over each of the possible routes:

Cost per Cubic Yard	From	to	Project #1	Project #2	Project #3
	Farm A		\$4	\$2	\$8
	Farm B		\$5	\$1	\$9
	Farm C		\$7	\$6	\$3

This constitutes the information needed to solve the problem. Arrange the above information and find the optimal solution.

APPENDIX

C-1

STANDARD NORMAL AREAS

Example: $P(0 < z < 1.96) = .4750$

This table shows the normal area between 0 and z.

z	.00	.01	.02	.03	.04	.05	.06	.07	.08	.09
0.0	.0000	.0040	.0080	.0120	.0160	.0199	.0239	.0279	.0319	.0359
0.1	.0398	.0438	.0478	.0517	.0557	.0596	.0636	.0675	.0714	.0753
0.2	.0793	.0832	.0871	.0910	.0948	.0987	.1026	.1064	.1103	.1141
0.3	.1179	.1217	.1255	.1293	.1331	.1368	.1406	.1443	.1480	.1517
0.4	.1554	.1591	.1628	.1664	.1700	.1736	.1772	.1808	.1844	.1879
